

# Welcome to module 3

We've covered so much in previous courses, from the foundations of security to a basic understanding of networks and programming languages like SQL and Python.

These concepts are core knowledge when preparing for a role in the security profession.

But how does this information help you on a day-to-day basis?

And to whom do you communicate this information?

In this course, we'll start by discussing who stakeholders are.

Then, we'll identify their roles in relation to security.

Finally, we'll share effective communication strategies for relaying key information to stakeholders.

But before we can communicate with stakeholders, we have to understand who they are and why they're important.

So let's get started!
