Mac OS

The last operating system we'll go over is Apple's Mac OS. We won't go into too many details about how to use thi
and Linux OS's. But if you know one operating system, you'll be able to navigate any operating system. Fortunatel
just go through the important parts of the operating system. Here's the desktop environment for our Mac. At the bo
applications. In the top right, you've got the system information like the time and date, network connectivity, batter
the top left here, you can see the Apple icon. This bar will change menu options depending on what application is
options. You can tell your computer to sleep, restart, and power off from here. The most important thing we want t
launches our system settings. From here, we can change any of our computer settings, like setting the orientation
printers, changing our screensavers, adding Bluetooth devices, and more. I'm going to click on the desktop now. Y
Preferences to Finder. Finder is the file manager for all Macs. If you open a new Finder window, you can navigate
if you're using a Mac laptop, you can use a two-finger click on a file to view more information and perform lots of d
operating system, the Windows or Linux, operates in a very similar way with similar menu options. You've really co
operating systems used today, gotten to play around with the system and even perform some common tasks. Nice
of operating systems because you'll be interacting with them every single day. Installing, managing, and navigatin
as an IT support specialist. You may even find yourself doing this for hundreds, if not thousands of machines in yo
