

py scripts from other repo's that i use (need to add to my repo)

https://github.com/Crypto-Cat/CTF/blob/main/pentesting/gen_nmap.py

```
#!/bin/python
#
# can be found on crypto cat's repo,
# https://github.com/Crypto-Cat/CTF/blob/main/pentesting/gen_nmap.py
#
# sudo apt-get install python3 masscan nmap
#
# This script will take in Masscan results and produce an output which can be fed into NMap

# Save your Masscan result as mscan.txt then run this script to produce nmap.txt then you can run:
# while read item; do sudo nmap -sV -sC -sS -sU $item; done < nmap.txt; rm mscan.txt nmap.txt

# If you want to export to .xml file you can use the following command and then later use this script to merge
files: https://github.com/sidaf/scripts/blob/master/nmap_merge.py
# while read item; do filename=$(echo $item | grep -o "^\\S*"); sudo nmap -O -sV -sC -sS -sU $item -oX
$filename.xml; done < nmap.txt

import re
from socket import inet_aton
from os import path

regex = re.compile(r"Discovered open port (\d+)\[(udp|tcp)\] on (\d+\.\d+\.\d+\.\d+)", re.I)
