Collision Decisions + GAME OVER

1. Make a new method to spawn animals

- In **SpawnManager.cs**, create a new **_void SpawnRandomAnimal() { }_** function beneath **_Update()_**
- Cut and paste the code from the **if-then statement** to the **new function**
- Call **_SpawnRandomAnimal();_** if **S** is pressed

2. Spawn the animals at timed intervals

- In **_Start()_**, use **_InvokeRepeating_** to spawn the animals based on an interval, then **test**.
- Remove the **if-then statement** that tests for **S** being pressed
- Declare new **_private startDelay_** and **_spawnInterval_** variables then playtest and tweak variable values

3. Add collider and trigger components

- Double-click on one of the **animal prefabs**, then _Add Component > Box Collider_
- Click **Edit Collider**, then **drag** the collider handles to encompass the object

- Check the "**Is Trigger**" checkbox
- Repeat this process for each of the **animals** and the **projectile**
- Add a **RigidBody component** to the projectile and uncheck "use gravity"

4. Destroy objects on collision

- Create a new **DetectCollisions.cs** script, add it to each animal prefab, then **open** it
- Before the final **}** add an **OnTriggerEnter** function using **autocomplete**
- In **OnTriggerEnter**, put **Destroy(gameObject);**, then test
- In **OnTriggerEnter**, put **Destroy(other.gameObject);**

5. Trigger a "Game Over" message

- In DestroyOutOfBounds.cs, in the **else-if condition** that checks if the animals reach the bottom of the screen, add a Game Over messsage: **Debug.Log("Game Over!")**
- Clean up your code with **comments**
- If using Visual Studio, Click *Edit > Advanced >* **Format document** to fix any indentation issues (On a **Mac**, click *Edit > Format > Format Document)*

6. Lesson Recap

New Functionality
- Animals spawn on a timed interval and walk down the screen
- When animals get past the player, it triggers a "Game Over" message
- If a projectile collides with an animal, both objects are removed

New Concepts & Skills
- Create custom methods/functions
- InvokeRepeating() to repeat code
- Colliders and Triggers
- Override functions
- Log Debug messages to console

  Pizza_gun

```csharp
using UnityEngine;

public class Pizza_gun : MonoBehaviour
{
    [SerializeField]
    public float Weapon_Bullet_Projectile_Speed = 60.0f;
    [SerializeField]
    private float topBound = -60;

    // Update is called once per frame
    void Update()
    {
        transform.Translate(Vector3.forward * Time.deltaTime * Weapon_Bullet_Projectile_Speed);

        if (transform.position.z < topBound)
        {
            Destroy(gameObject);
        }

    }
    private void OnTriggerEnter(Collider other)
    {
        Destroy(gameObject);
        Destroy(other.gameObject);
    }
}
```

Spawn_manager

```csharp
using System.Collections;
using System.Collections.Generic;
using UnityEngine;

public class SpawnManager : MonoBehaviour
{
    public GameObject[] animalPrefabs = new GameObject[10];
    [SerializeField]
    private float spawnRangeX = 20.0f;
    [SerializeField]
    private float spawnPozY = -20.0f;
```

```csharp
    [SerializeField]
    private float startDelay = 5f;
    [SerializeField]
  private float spawnInterval = 2f;
    // Start is called before the first frame update
    void Start()
    {
        // invoke repeating, will make the method or void def function with name "nameInQuotes"
        // it will call that function after , delay, then chozen interval
        InvokeRepeating("SpawnRandomAnimal", startDelay, spawnInterval);
    }

    // Update is called once per frame
    void Update()
    {
        if (Input.GetKeyDown(KeyCode.S))
        {
          SpawnRandomAnimal();
        }
    }
    void SpawnRandomAnimal()
    {
        // Select a random index within the array range
        int random_animal_Index = Random.Range(0, animalPrefabs.Length);
        Vector3 spawnPos = new Vector3(Random.Range(-spawnRangeX, spawnRangeX), spawnPozY, -
30);
        // Instantiate the selected animalPrefab
        Instantiate(animalPrefabs[random_animal_Index], spawnPos,
          animalPrefabs[random_animal_Index].transform.rotation);
    }
}
```

- movement

```csharp
using UnityEngine;

public class Movement : MonoBehaviour
{
    [SerializeField]
```

```csharp
    private float speed = 10.0f;
    [SerializeField]
    private float xRange = 10.0f;
    [SerializeField]
    private float horizontalInput;
    [SerializeField]
    public GameObject ProjectilePrefab;
    // Start is called before the first frame update
    void Start()
    {

    }

    // Update is called once per frame
    void Update()
    {

        horizontalInput = Input.GetAxis("Horizontal");
        // Calculate the desired position based on the input
        Vector3 desiredPosition = transform.position + Vector3.right * -horizontalInput * Time.deltaTime
* speed;
        // Clamp the desired position within the x range
        float clampedX = Mathf.Clamp(desiredPosition.x, -xRange, xRange);
        desiredPosition = new Vector3(clampedX, desiredPosition.y, desiredPosition.z);
        // Move the object to the clamped position
        transform.position = desiredPosition;
        if (Input.GetKeyDown(KeyCode.Space))
        {
            // shoot pizza
            Instantiate(ProjectilePrefab, transform.position, ProjectilePrefab.transform.rotation);
        }
    }
}
```

Animal Movement

```csharp
using UnityEngine;

public class AnimalMovement : MonoBehaviour
```

```csharp
{

    public float Animal_Movement_Speed = 50.0f;

    public float lowerBound = 50;

    // Start is called before the first frame update

    void Start()

    {

    }

    // Update is called once per frame

    void Update()

    {

        transform.Translate(Vector3.forward * Time.deltaTime * Animal_Movement_Speed);

        if (transform.position.z > lowerBound)

        {

            Destroy(gameObject);

            Debug.Log("In the vernacular of your people... \n Game Over!");

        }

    }

}
```
